

**Blastco**<sup>®</sup>  
a TF Warren Company

## FIELD APPLICATORS OF PROTECTIVE COATINGS AND LININGS

## Blastco serves the following industries:

- Terminals
- Pipeline
- Petroleum Refining
- Water and Wastewater
- Chemical Processing
- Alternative Fuels
- Industrial Manufacturing

## Blastco Overview

For years Blastco has gained credibility through its strong presence in the refinery industry as a maintenance field abrasive blaster and applicator of protective coatings.

Blastco's history for high performance coatings began with field applications for above ground water storage tanks. After years of quality service, we expanded into more complex fabrications and coating systems for petrochemical tanks and high temperature furnace units. We have also earned a positive reputation for rehabilitating bridges, dams, sluice gates (water gates), silos, lift stations, water treatment plants and related facilities.

From our success as a coatings and linings applicator, Blastco has grown into a general contractor role, taking responsibility for each step of the process. As a contractor, we have acquired the skills and staff to accomplish most of the processing in-house. Any task that is outside of our skill set is sub-contracted to reputable companies who have proven competence in this industry.

### Blastco Qualifications:

- NACE certified coating inspectors
- Personnel and facility to complete any size project
- QP-1, QP-2, and QS1 certified contractor licensed in multiple states
- Equipped to service the entire continental United States and the Caribbean
- Certified members of SSPC and AWWA
- Impeccable safety records
- In-field lead removal capabilities
